

## Biology

Biology is the study of life. Through the study of biology students employ the processes of science to explore the diversity of life and the inter-relationships between organisms and their environment. They become aware of the use of living organisms and their products to enhance human health and the environment. They are provided with the knowledge, skills and understanding to pursue further education, training and employment in biology-related fields, and to make judgements on contemporary issues in biology and science that impact on their daily lives and on society.

The school is very involved in all Science exhibitions, in 2009 3 students took part in The Young Scientist exhibition under Biological & Ecological Sciences category. These students also took part in the Scifest at C.I.T in April 2009 and won in their category.
